

MSS DEFENCE® PTD CONSULTANCY PACKAGE

Prior to departure to high risk areas (HRA)

2017 Datasheet

M S S D E F E N C E

THIS PRIOR TO DEPARTURE CONSULTANCY PACKAGE GIVES MANAGEMENT ALL NECESSARY TOOLS TO OPERATE A VESSEL IN HIGH-RISK AREAS

Our PTD consultancy is prepared and executed by highly skilled and experienced maritime security consultants. Our consultants all have a NATO naval background on a senior officer level.

Risk Classification Consultancy

Depending on pre-defined parameters we classify each passage risk as LOW, MEDIUM, HIGH or EXTREME. This classification will be performed along a vulnerability and threat assessment matrix. The vessel vulnerability assessment covers topics like: Design & Architecture, Physical (structural) security, Procedural security, Command & control, Communication, Training and Experience. The threat assessment addresses topics like Intentions, Capabilities and Opportunities.

Risk Mitigation Consultancy

Based upon the results of the risk classification process MSS Defence will make recommendations for risk mitigation. This can be one or a selection of the following actions:

- Improvements of the vessel's design & architecture
- Installation of extra structural security equipment for vessel and crew for detection, deterrence and protection
- Training of ISSC/SSP security measures
- Check on implementation of Vessel Crisis Management Plan (VCMP)
- Crisis & security management training of ship's master, SSO and/or crew
- Adjustments on crew list (ship's master, SSO and/or crew)
- Change of routes
- Change of time planning
- More....
